

The **Lineman 1 30K Running Board** is designed and built to meet the requirements of today's transmission projects, for pulling under all types of conditions, in all types of terrain. The **Lineman 1** tail design provides a true guide through the center of the stringing block reducing shock and the possibility of misalignment, working through tangents, angles and break overs. Available in 7½" or 8½" conductor center for use with the industry's most popular blocks, the **30K Running Board** can be easily converted in the field to change from one conductor center to the other.

**Specifications**

Maximum Pulling Capacity . . . . .	30,000 lbs.
Length . . . . .	40¾"
Width . . . . .	9"
Conductor Center . . . . .	7½" or 8½"
Weight . . . . .	55 lbs.
