The Lineman's Limo

There are many different names for these unique machines, including Powered Line Car, Spacer Buggy, Line Cart, Conductor Car, and Sky Buggy just to name a few.

The Lineman's Limo was designed to make the lineman's conductor work safer and easier. The Limo is powered by a six horsepower electric start Subaru engine. Each drive wheel has two tension rollers securing it to the conductor. All controls are hydraulically operated.

The Limo is a lightweight single person vehicle and can be used for installations or inspections. The positive hydraulic four-wheel drive system allows the Limo to move up or down steeper inclines in the conductor. The unique transfer system allows the operator to move through structures and pass over insulators or spacers without leaving the interior of the Limo and requires no lifting or pulling. There are four wheels and two safety devices on the conductor at all times, providing additional safety and stability during the transfer process.

Specifications

- Height77"
- Length73"
- Width39"
- Weight698 pounds
- Load Limit300 pounds
- Engine6.0 Subaru with electric start
- Hydraulic Tank Capacity5 gallon
- PumpSingle stage gear 4-GPM
- Filter10 micron
- System1500 PSI

Features

- Hydraulic 4-wheel drive
- Unique hydraulic transfer system to move through the structures
- Two hydraulically operated tension wheels for each drive wheel securing it to the conductor.

Options

- Footage counter
- Electric hot or cold cooler
- Umbrella for operator shade
- Cushioned Seat (removable)

Note: Improvements in design and specifications are subject to change without notice.
